

SHORELINE PROTECTION SOLUTION PODS

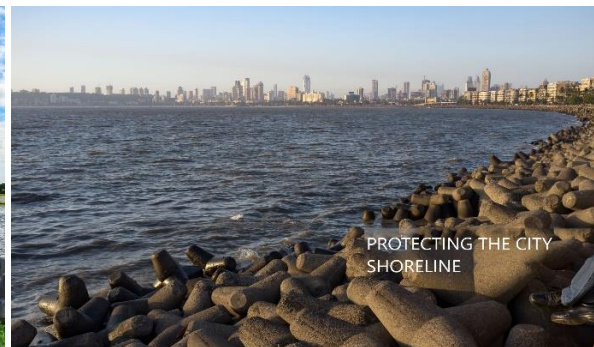

The team at Versamix Industries have launched a new innovative Patent Pending process for Precast Concrete Forms. Our precast forms (Lock Block, SPS-Pods) require No Form Release Oil, as well they are a fraction of the weight of conventional precast forms.

The Versamix Industries forms for the Shoreline Protection Solution – Pods, are made from the same Patent Pending process and require No Form Oil. These Pods are an alternate solution to the Armour stone that currently gets used for shoreline protection along lakes, rivers, streams and creeks.

Benefits:

1. Ergonomics – The Forms are a fraction the weight of the conventional steel form. Easier to handle and move around, easier on the back, less chance of fingers getting pinched. Much Safer alternative to the heavy steel form.
2. Environmental – No Form Release Oil needed, no residual oil on the finished product, especially important when placing the SPS-Pods in or near a body of water. No contamination of the soils where the SPS-Pods are cast, no contamination of the workers clothing, save the time to spray the form during setup, save the cost of form release oil.
